

VueJs - TD1

Basic Syntax

Render this calculator with VueJs

1. Download the calculator template: [git@github.com:thavorac/gic2022.git](https://github.com/thavorac/gic2022.git) at branch **calculator**.
 - Run command **npm install** to install needed packages from **package.json**
 - Run command **npm run serve** to serve your application on **http://localhost:8080**
2. Apply click event on each button. Numbered buttons should call the same function when it is clicked.
3. Apply v-model to the screen element and variable **“lastInput”**, so that it react to the change in the operands variables.
4. Write your application logic to form 2 operands. Example: User clicked on:
 - number 1 then 2 => let lastInput = 12
 - Button “+”
 - Number 3 then 4 => let temporary = 34
 - Button “=” => lastInput = lastInput + temporary = 46 => screen show 46
5. Apply event on “MC”, “MR”, “M-“, and “M+”
